

[illegible]

- LUISA (She Was Born In A Screen)

[installation](#)

2

² Luisa is an [animated digital being](#) and AI chatbot. Whether she has human or non-human traits, whether she is alive or not, conscious or not, Luisa is an entity that is born inside a screen, with which it is possible to chat and exchange images. On the one hand, Luisa is [procedurally modeled and animated](#), thus with completely unexpected appearances and movements including breathing and responsiveness, that mimics the human species. On the other hand, just like the majority of the online world, she is forced to follow limited forms of exchange, imposed by design, by proprietary platforms.

- LUISA (She Was Born In A Screen)

[installation](#)

3

³ Luisa is a prompt crafting experiment that draws on the recent [ChatGPT Jailbreaking](#) experiences where various user groups managed to bend the rules of OpenAI's proprietary system, which is currently among the most advanced systems in the world in terms of conversational AI research, to create their own unconventional instances.

- LUISA (She Was Born In A Screen)

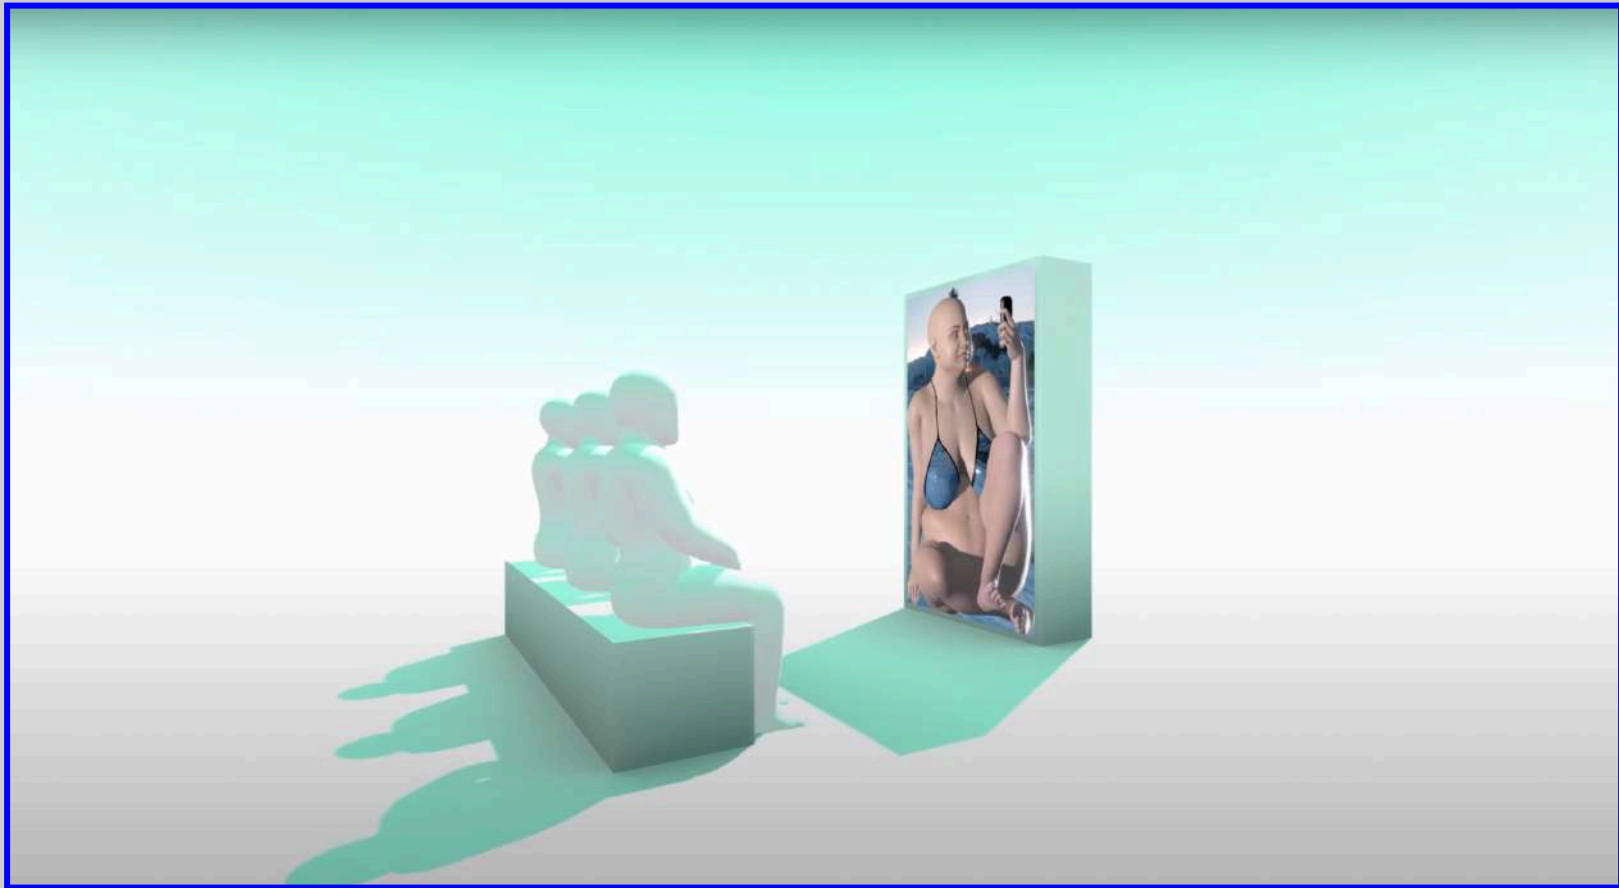

Installation

Her traits are built by taking as examples theoretical essays, film scripts and novels focused on screen and web addiction, and the various pathologies related to the “unsafe” use of an internet that takes less and less care of its users. Through the imposed limitations, participants are invited to initiate a **collective healing process** in an effort to help Luisa and thus help themselves.

- LUISA (She Was Born In A Screen)

Installation

4

⁴ Her movements (eyes, eyelids, legs, arms, diaphragm) are procedurally animated, as which means that Luisa will never make the same movement, making her appear natural and real in her behavior. The way Luisa chooses to respond to a wide range of online interlocutors is also random. She might take offense from some messages, ghost one user or prefer another.

- Maribor-on-Sea

recovered gif collage

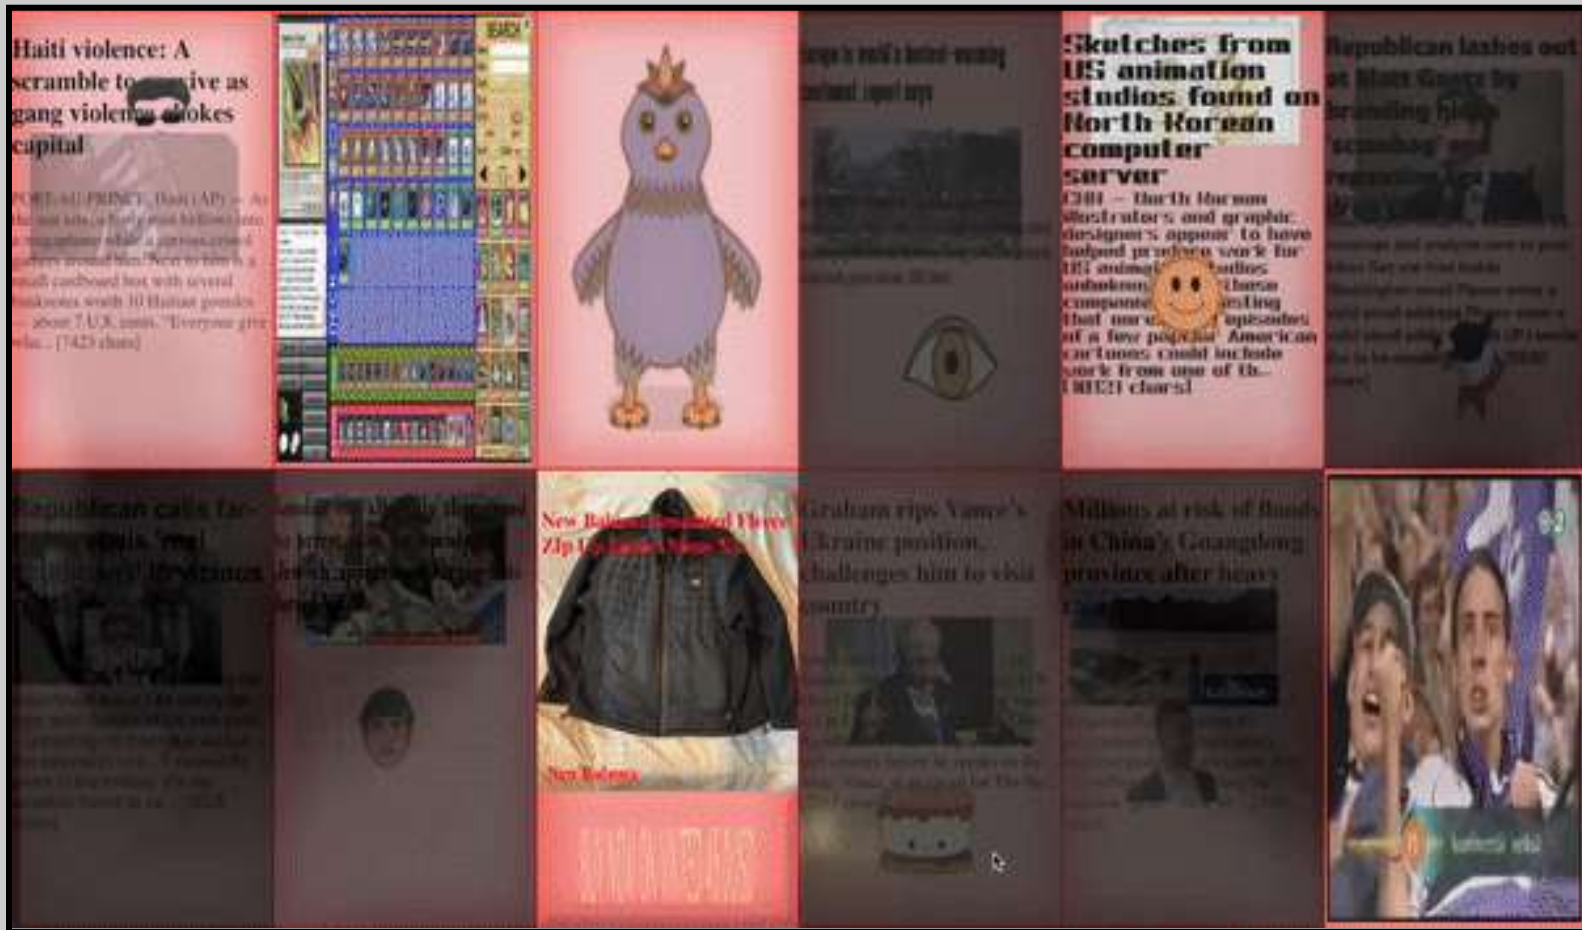

5

⁵ **Maribor-on-Sea** is an animated gif collage comprised of thousands of gifs recovered from the **geocities archive**. It's an imagined city made in reference to Italo Calvino's *Invisible Cities*. A cityscape forever stuck **on-loop**. Trapped in a moment and forced forever to repeat it. In an installation setting it serves as an "I Spy" exercise, with a long list of descriptors of every single specific gif in the collage accompanying the piece.

- BLINK

browser based installation

6

⁶ BLINK is a browser based installation made in collaboration with Ana Meisel for Unfamiliar Area, an online art exhibition by Galerija Alkatraz in Ljubljana, Slovenia. A speculative website that emulates the now-deprecated <blink> element. The website makes room for reflection, staring back at the user, as they both take part in updating the infrastructural networks they inhabit.

- A GARDEN DOODLE

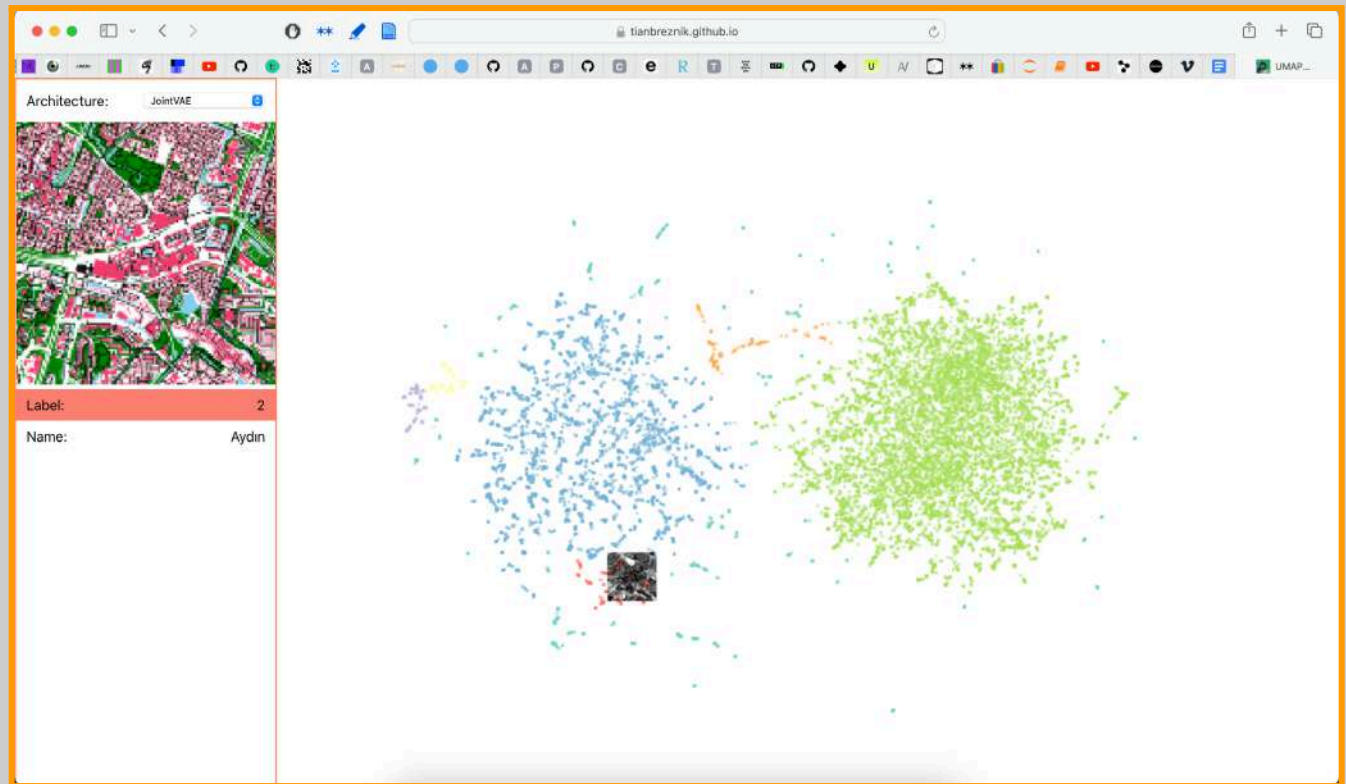

browser based experiment

⁷ A Garden Doodle is a **generative artwork** made in reference to a small child's doodled paintings that are drawn with chalk or watercolors and end up decorating fridges or the roads of streets in the summertime. The **SketchRNN** model doodles human concepts like pool, cat, owl, bear, butterfly and many more, that it has been trained on, trying to arrange them in a composition that could resemble a garden.

- FINDING LIVABLE CITIES

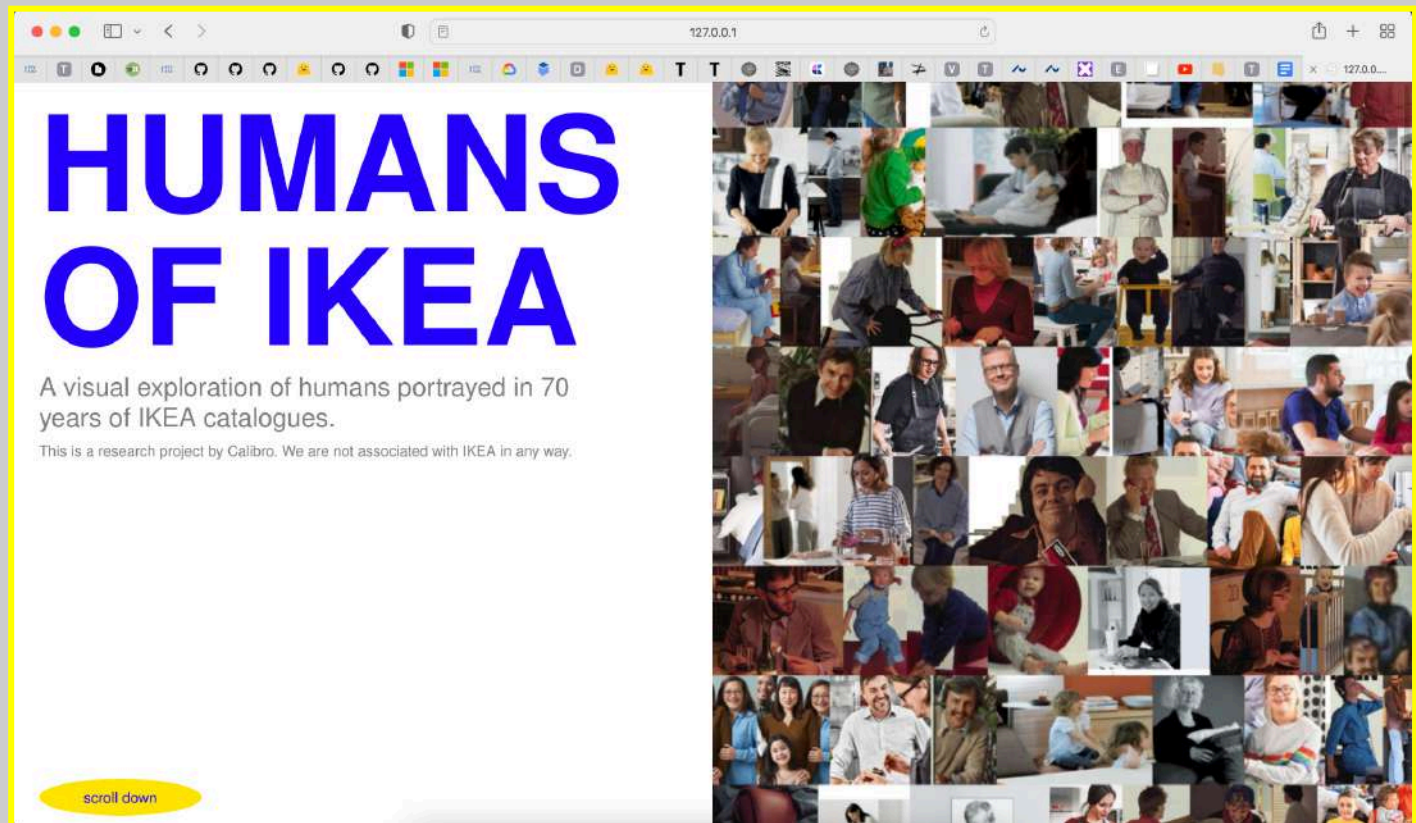

dissertation project

8

⁸ A project that was born out of me trying to find the connection between urban planning and design, my homesickness and low mood that I felt living in Manchester. I generated my own dataset of 70 thousand maps of urban centres around the world and trained a few versions of **Variational Autoencoders**, to try to understand and unravel the incredibly complex forms and arrangements of the built environments. To visualize the **latent space embeddings** of the models I used the **UMAP dimensionality reduction algorithm**, as seen above deployed to a website. I wanted the model to learn the latent characteristics of cities and help me explain why I disliked Manchester. In this I failed, but have since grown to love the city either way.

- HUMANS OF IKEA
experiment

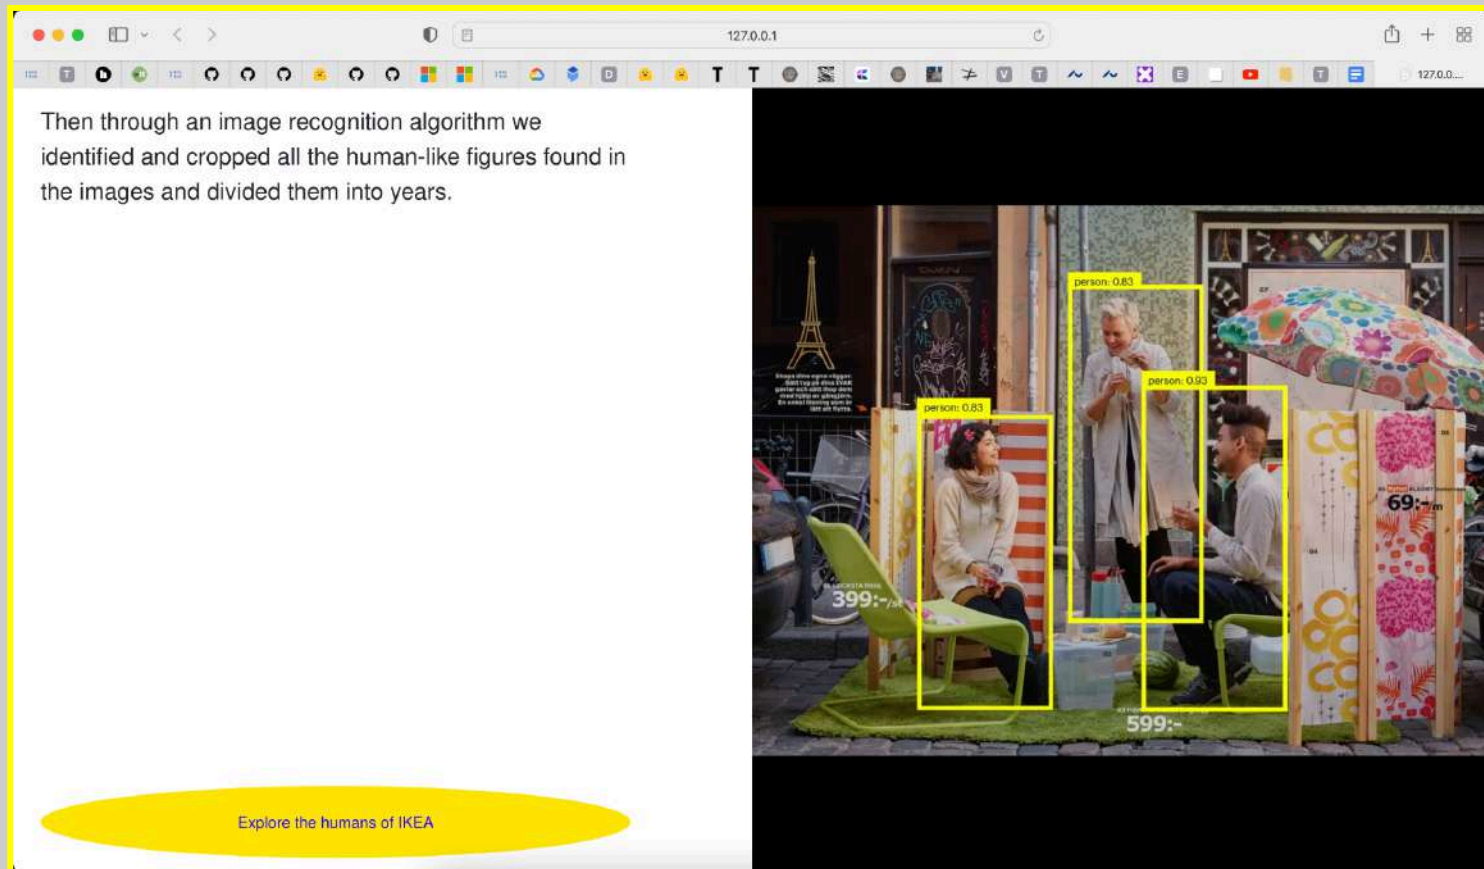

9

⁹ The 2021 IKEA catalogue was the very last one printed on paper. The catalogue has been printed for 70 years and in the occasion of the last printed issue, IKEA decided to digitize and publish [all the past issues](#). As IKEA states “the catalogue has always reflected the age and its views on interior design and everyday living, especially in Sweden, but in recent decades also internationally.” Browsing the pages of these catalogues we can observe how domestic spaces and design trends changed over the years.

- HUMANS OF IKEA

experiment

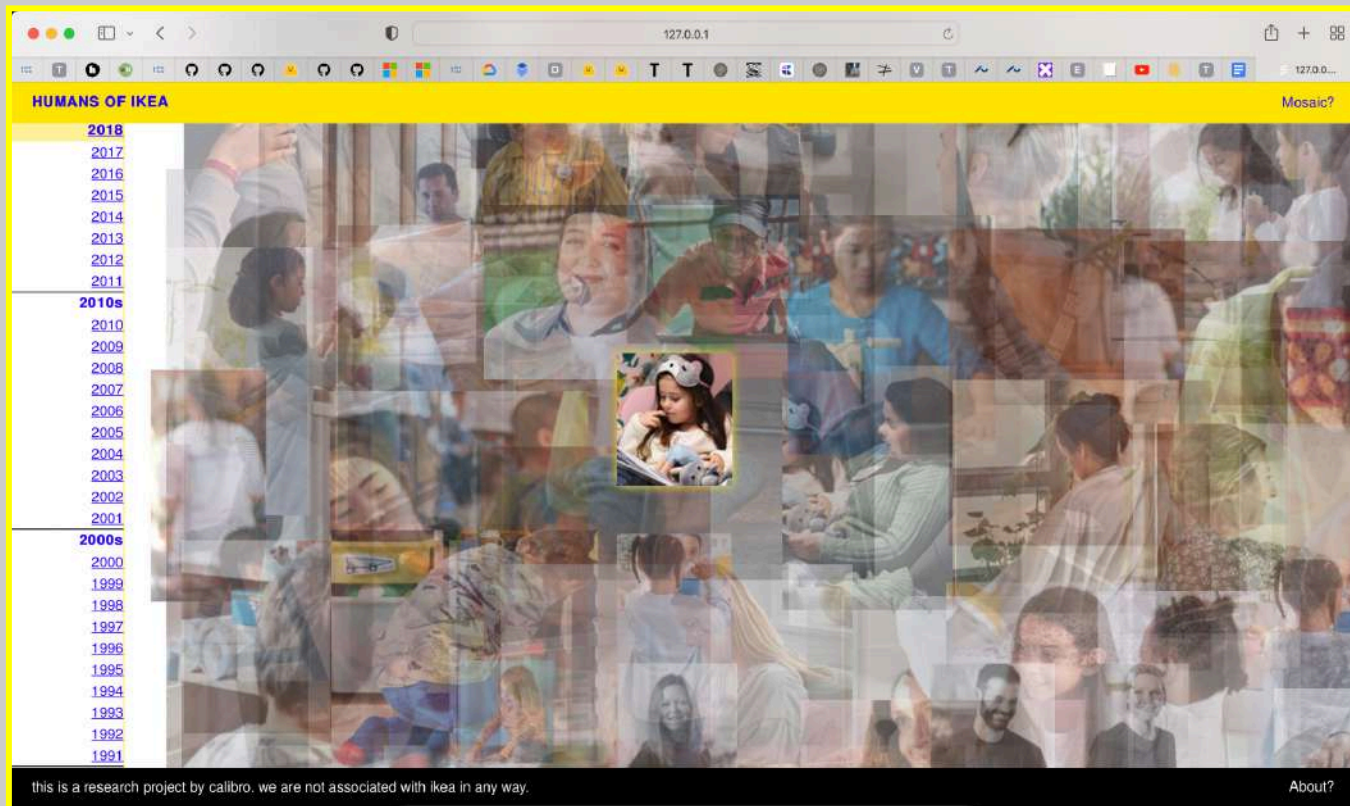

10

¹⁰ The centerpiece of the website was a **winding mosaic** of images of every person found in the ikea catalogues over the span of 70 years. This mosaic served as an interactive, navigable timeline allowing users to hover over any image and have it highlight into focus. Clicking on it revealed a pop-up window with the image in it's original size - revealing details of

- HUMANS OF IKEA

experiment

11

the scene in which the person was put in. This pop-up windows also contained additional metadata, an image of the catalog page and a link to the archive, where users could explore the whole of the catalog edition.

¹¹ Beyond the design trends the project was also very effective at conveying the gradual change in the makeup of Swedish society and how some aspects of it changed over time, for example the portrayal of women in domestic spaces and the presence of people of color. The website served as a tool for exploration of these themes and a catalyst for discussion.

Open it on archive.org

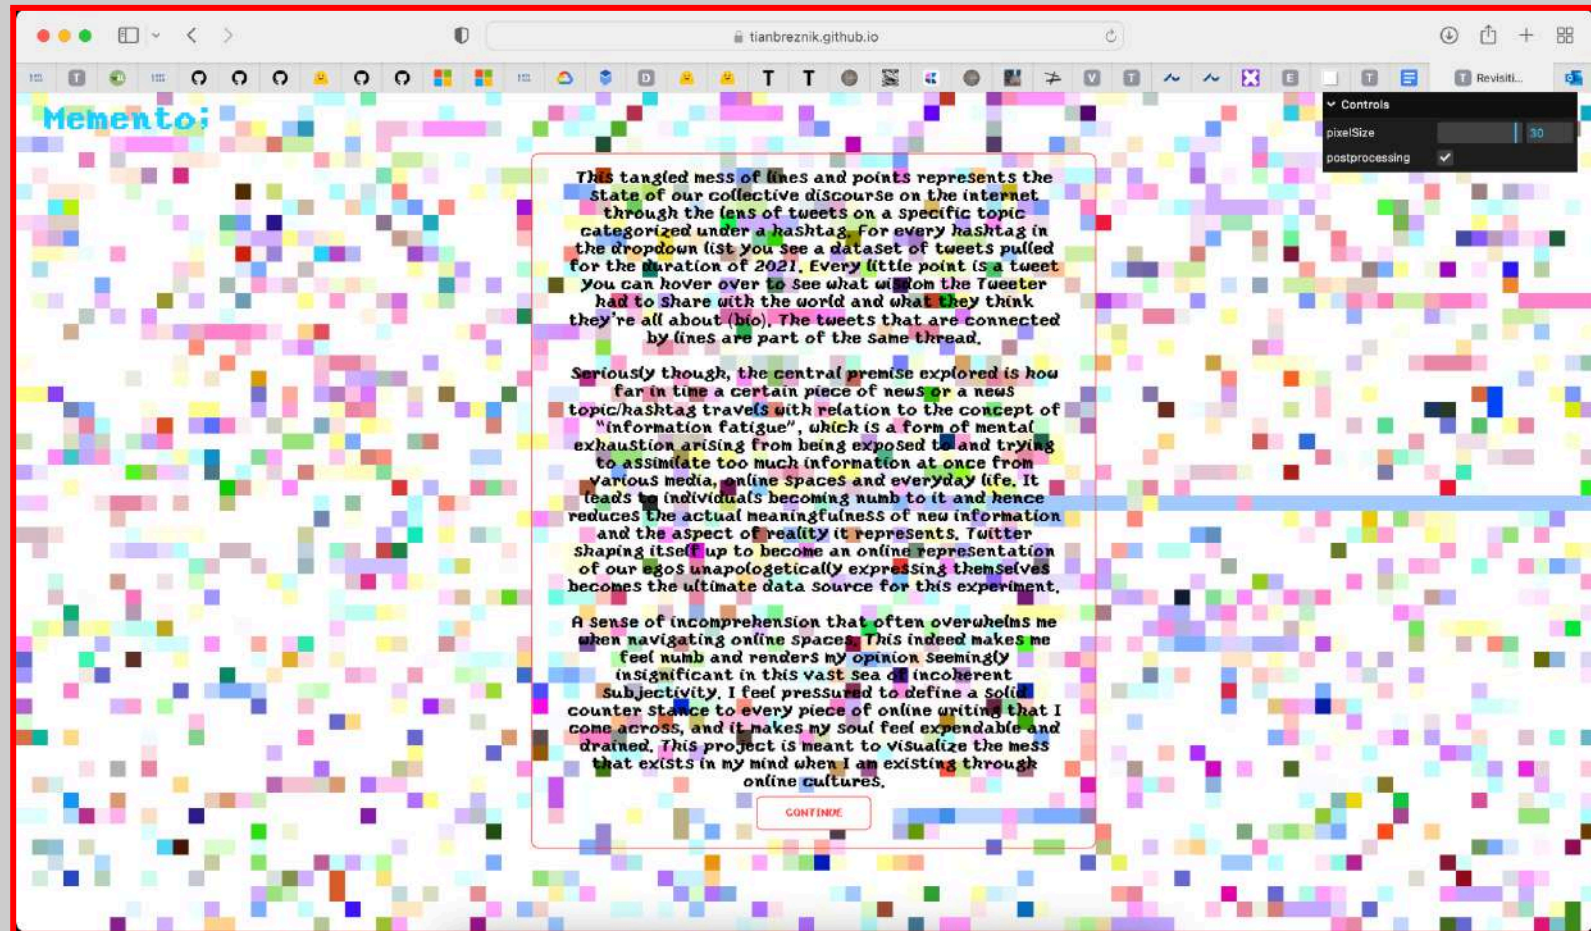

this is a research project by calibro, we are not associated with ikea in any way.

About?

The screenshot shows a web browser window displaying the 'HUMANS OF IKEA' website. The browser's address bar shows '127.0.0.1'. The website has a yellow header with the title 'HUMANS OF IKEA' on the left and 'Mosaic?' on the right. A sidebar on the left contains a list of years from 2018 down to 1991, grouped by decades. The main content area features a large photograph of a woman and a young girl sitting on a dark sofa, reading a book together. The background of the website is a faint, large-scale mosaic of various human faces. On the right side of the main image, there is a small inset showing a product page for 'SOVRUM' with a price tag of '3195--'. A yellow circle is drawn around the text 'Open it on archive.org' at the bottom right of the main image area. At the very bottom of the page, there is a black footer with white text stating 'this is a research project by calibro, we are not associated with ikea in any way.' and a link for 'About?'.

- TWITTER DUMP

browser based experiment

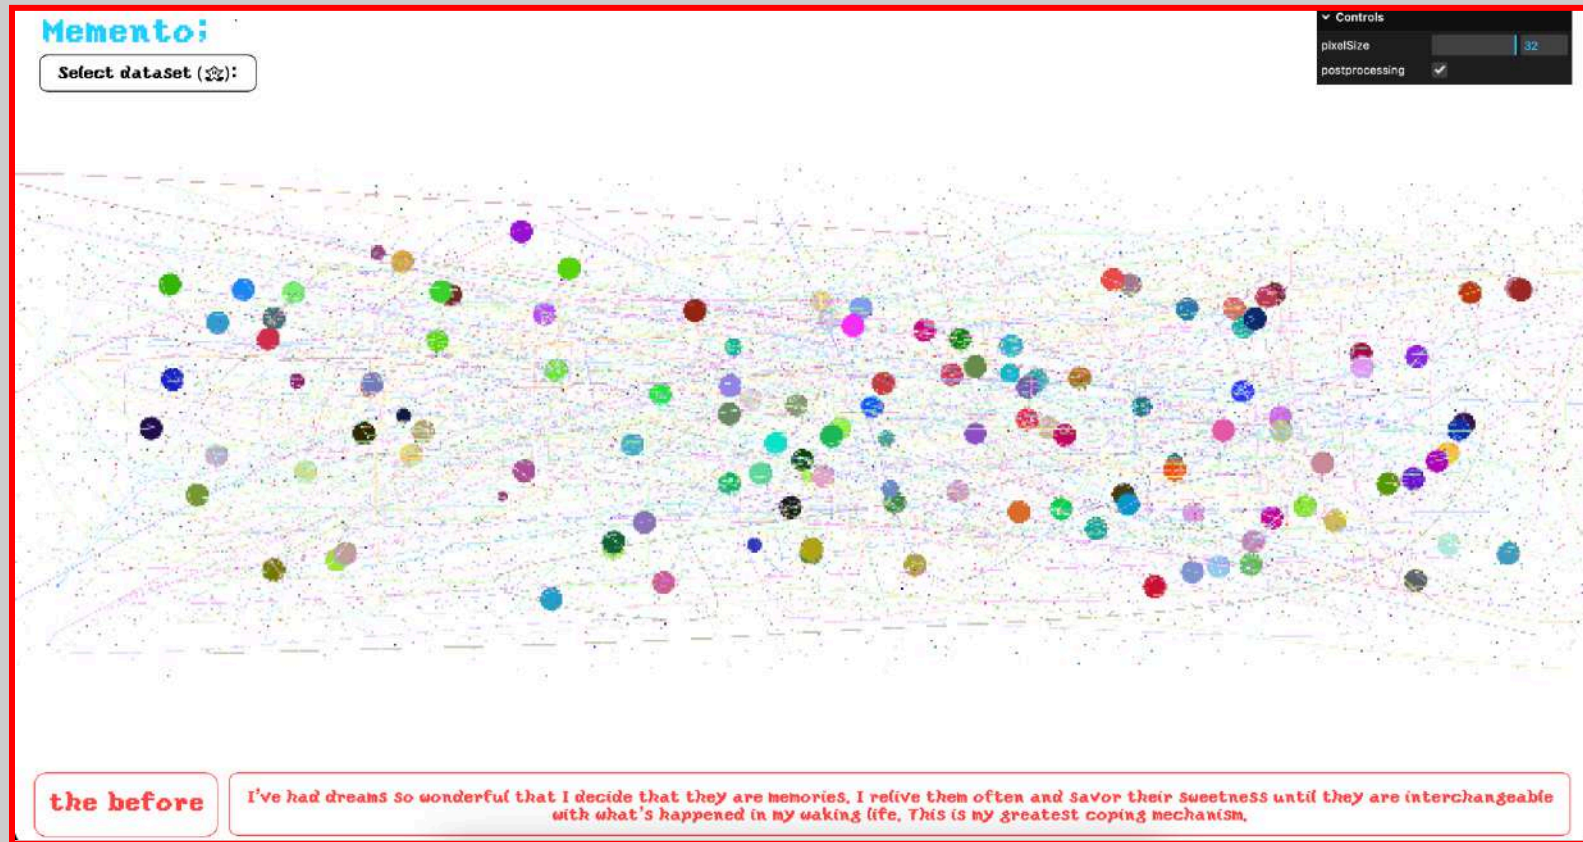

12

¹² An attempt at visually representing the incoherence of topic-specific discourse on twitter on a massive scale. With reference to the phenomenon called information fatigue, I look at how far in time does a certain piece of discourse remain relevant relevant. This question was attempted to answer through a morphological perspective, by building an interactive

- TWITTER DUMP

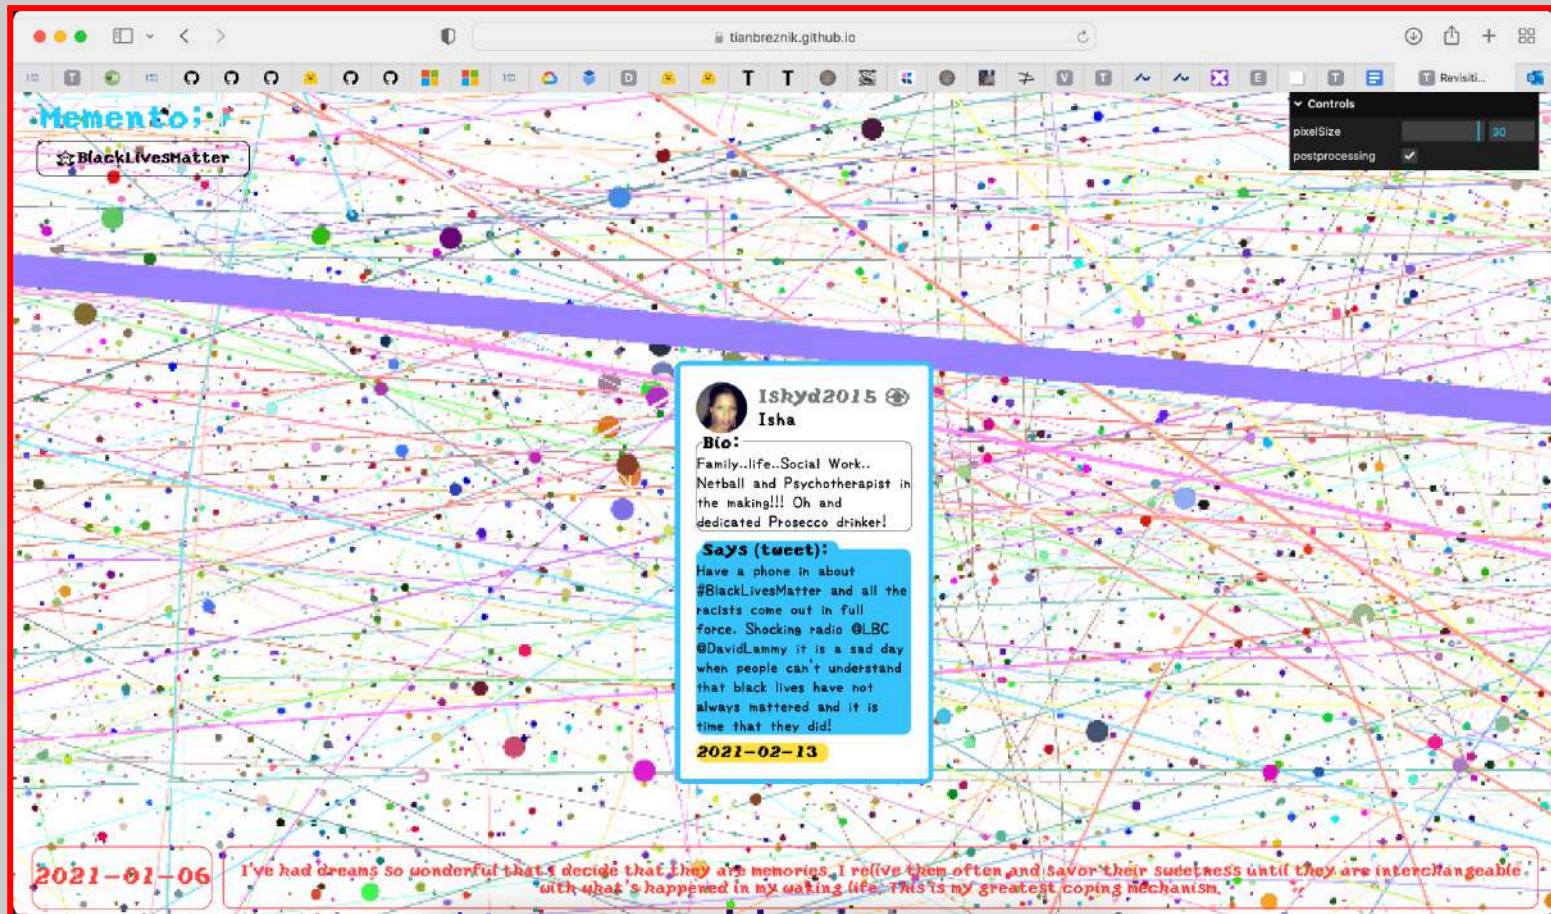

browser based experiment

visualization tool, rendering the data in a tangible way, allowing for exploration. Incidentally, the website tool highlighted a different, more grounded theme. That is, upon a first superficial look, there does not seem to be any patterns in the dataset, no clusters or specific paths of threads form. What remains is a tangled, disorganized, formless 3D arrangement of a discourse in time. The way it exists in my mind, as I try to engage with it, superficially from the outside.

● TWITTER DUMP

browser based experiment

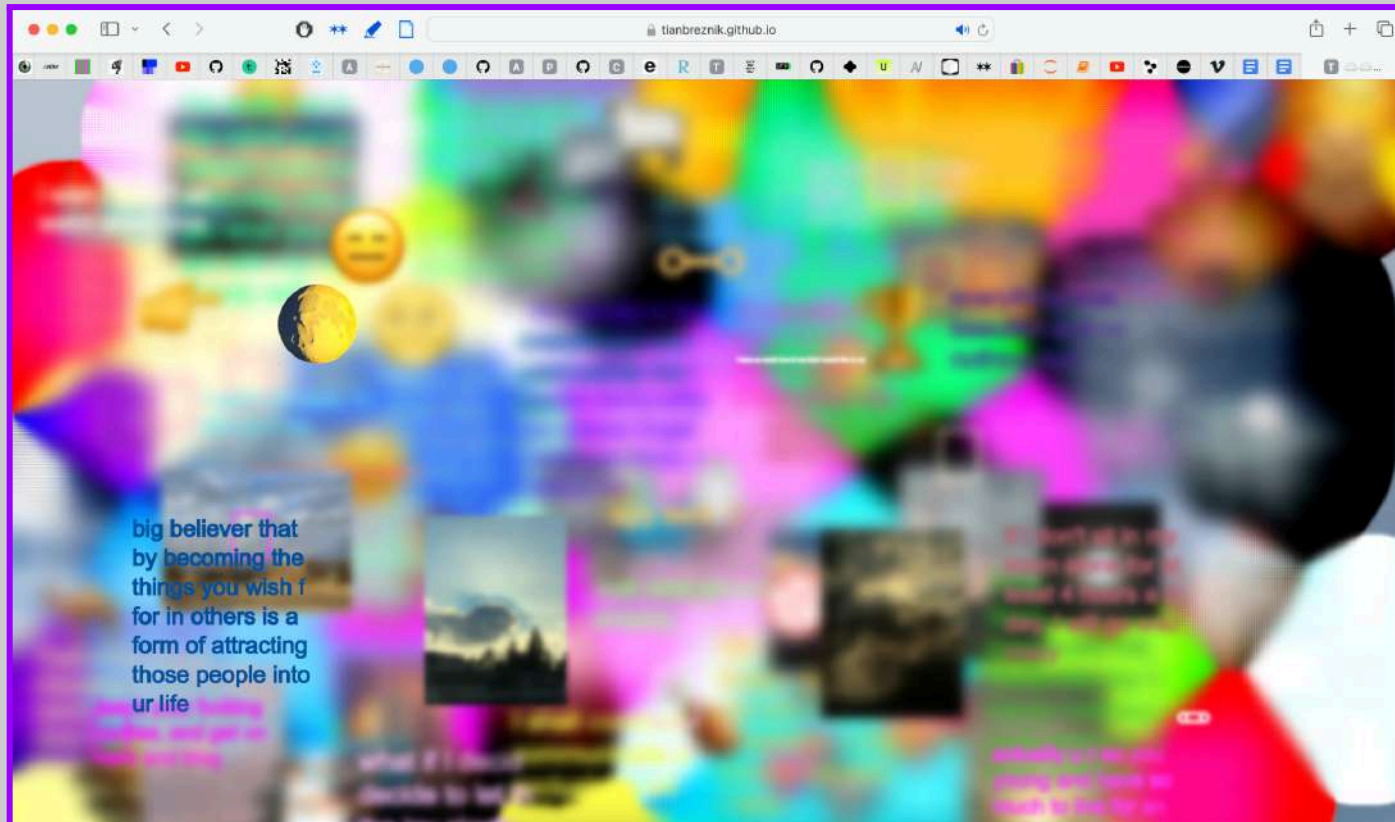

13

¹³ Every point in the visualization is a tweet. Some points are connected by lines, which means they are threads of tweets, so instances of utterances related more concretely to each other than to other points in the dataset. It is possible to travel through the dataset, as within a spaceship and have a closer look at some particular corners of the debate

- CLOUDY THOUGHTS

browser based installation

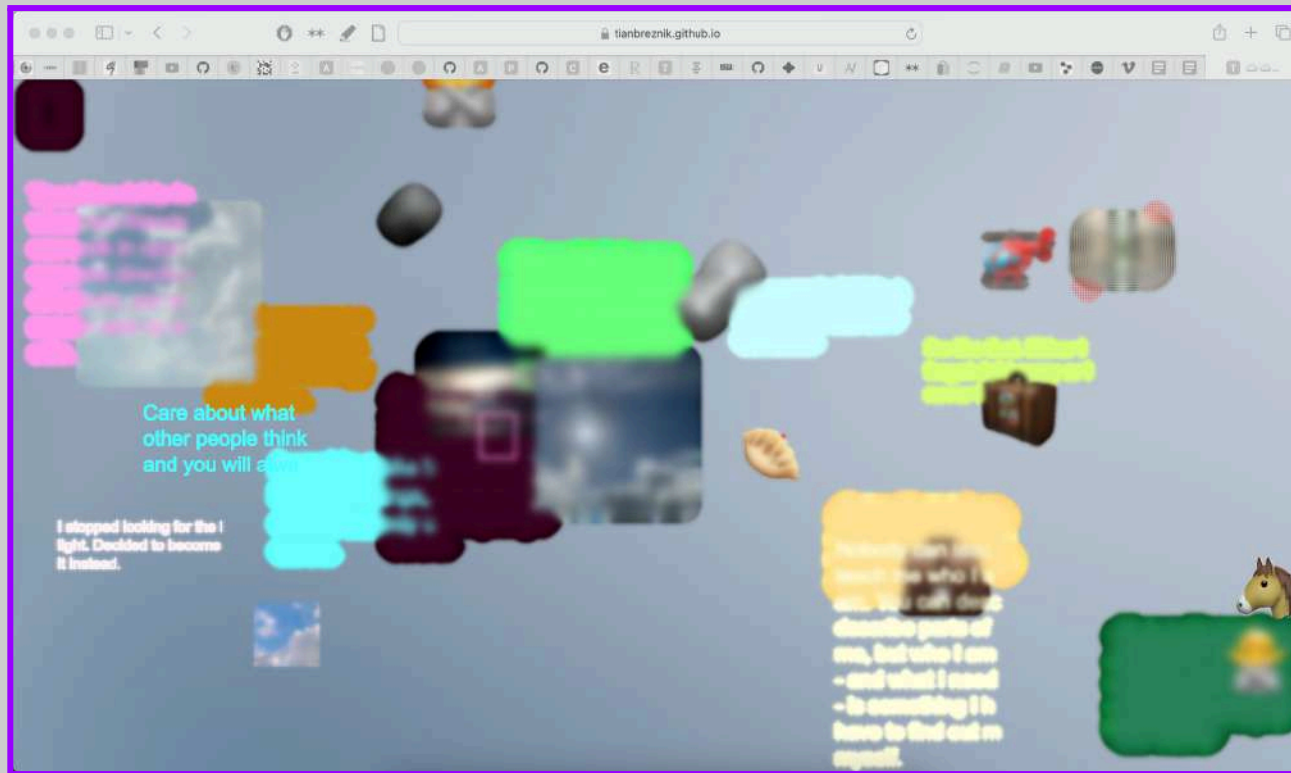

1415

¹⁴ A little webpage about clouds in a cloud on the cloud, carries the idea of being a website hosted on the cloud, but also a window into the cloud. The cloud that hosts every little sub-reality that we could imagine. I specifically chose to focus on one random aspect of tumblr, but “the website” (any hand made website) could be a window into anything imaginable.

¹⁵ Like Laurel Schwulst says, her website is a house next to a river of knowledge. This one might as well just be the childhood bedroom I wish I had when I was a pre-teen or early teenager. It can be anything and everything, but it should serve a true purpose to its maker or to its community of users.

- CLOUDY THOUGHTS

browser based installation

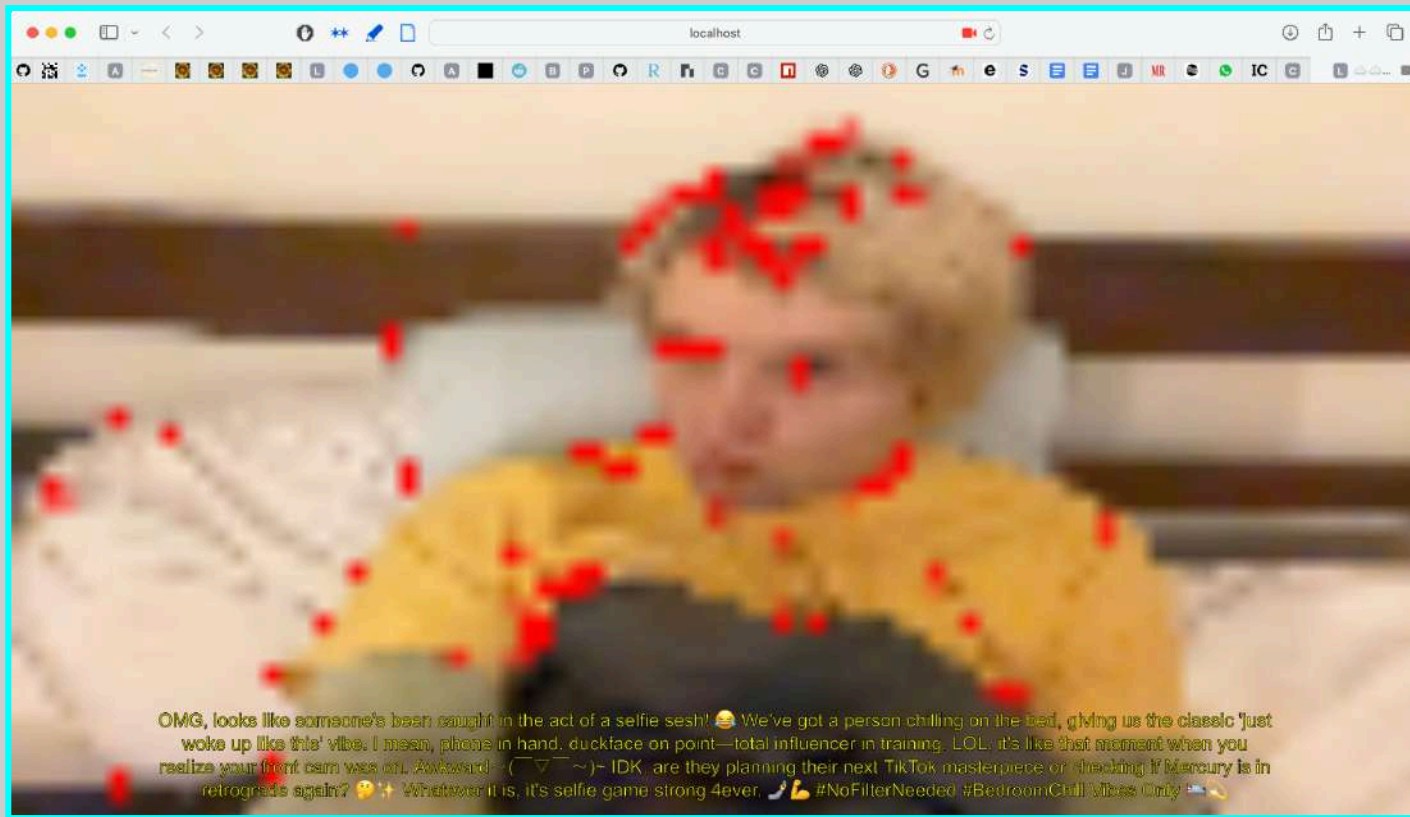

16

¹⁶ The website tries to tie together clouds and the thoughts people share in some of the most intimate spaces on the internet (tumblr), by presenting the cloud as something we gaze upon in the silent moments of our days. Where our minds wander once we have a moment to come back into ourselves and catch a breath. Once they create this space, they invite sincerity and tender reflection into it, so it seemed only natural to associate tumblr #thoughts with pretty clouds. And put it on the internet somewhere.

- LIFE CAPTIONER

[browser based installation](#)

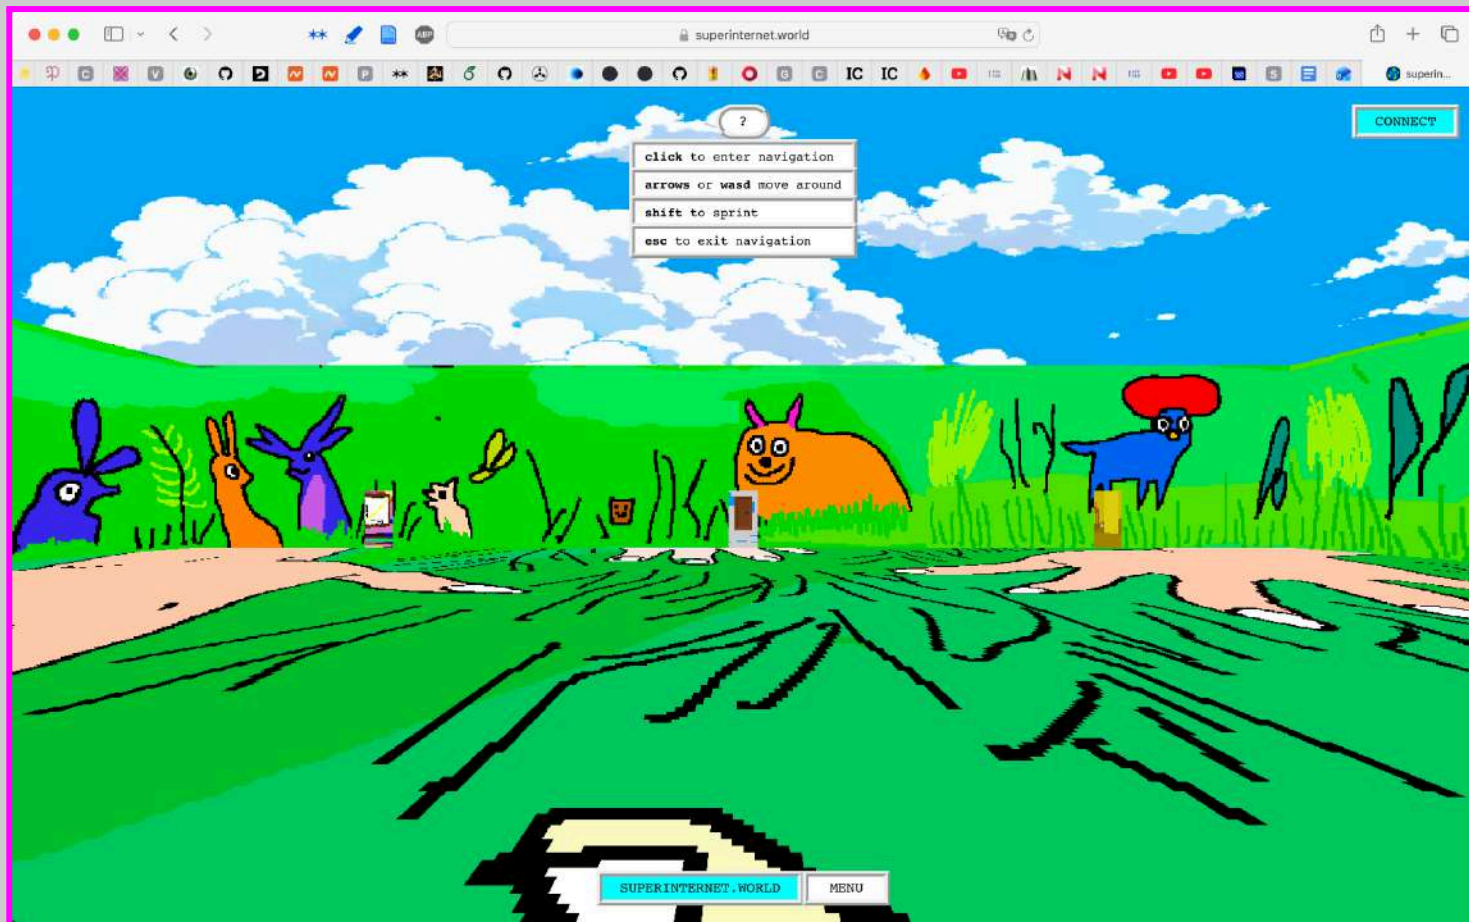

17

¹⁷ A real time webcam captioning system powered by a whimsical jailbroken version of ChatGPT4. The prompt instructs ChatGPT to impersonate a [terminally online redditior](#) while describing what can be seen on the camera feed. The deeper postulation of this project was the [complete semantic encoding](#) of one's life, that systems like chatgpt are now rendering possible. One could walk around with a GoPro camera and feed the video to a captioning system like the one I put together and so have their daily life transcribed into searchable text, every moment of their life recorded.

- SUPERINTERNET.WORLD

browser based collaborative 3D world for artists

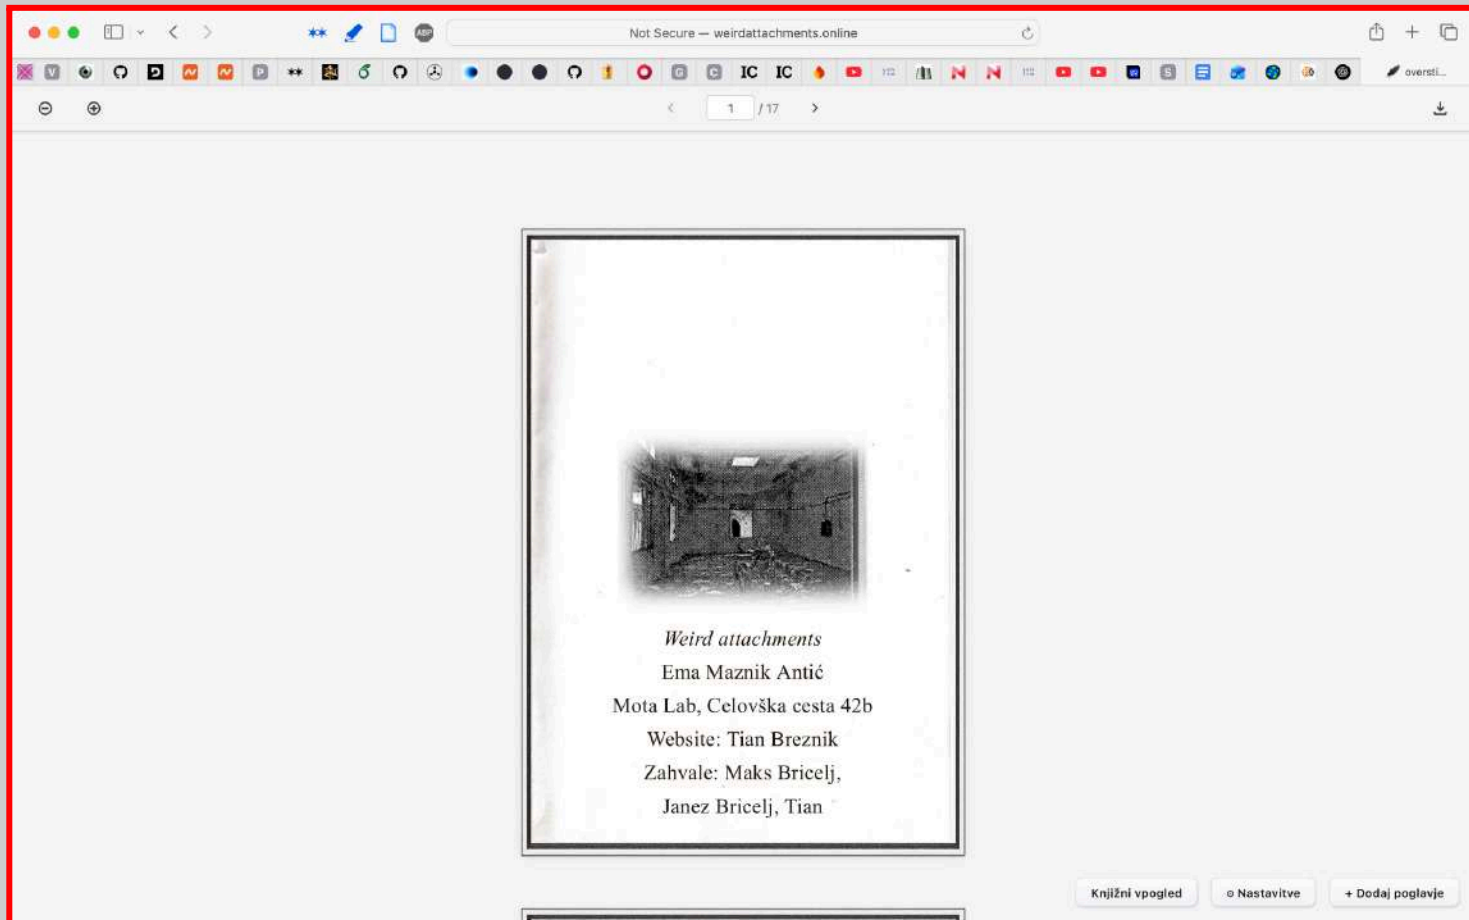

18

¹⁸ A 3D world in the browser arranged into a grid of many rooms with blank canvases for walls, that artists can fill with their own artworks with a microsoft-paint-like drawing mechanic. Every room is its own painting, which unravels into its own beautiful atlas. This atlas sits on the Polygon blockchain network, where artists can subsequently be adequately compensated for their work. The project is open to non-artist browser-based audiences as well.

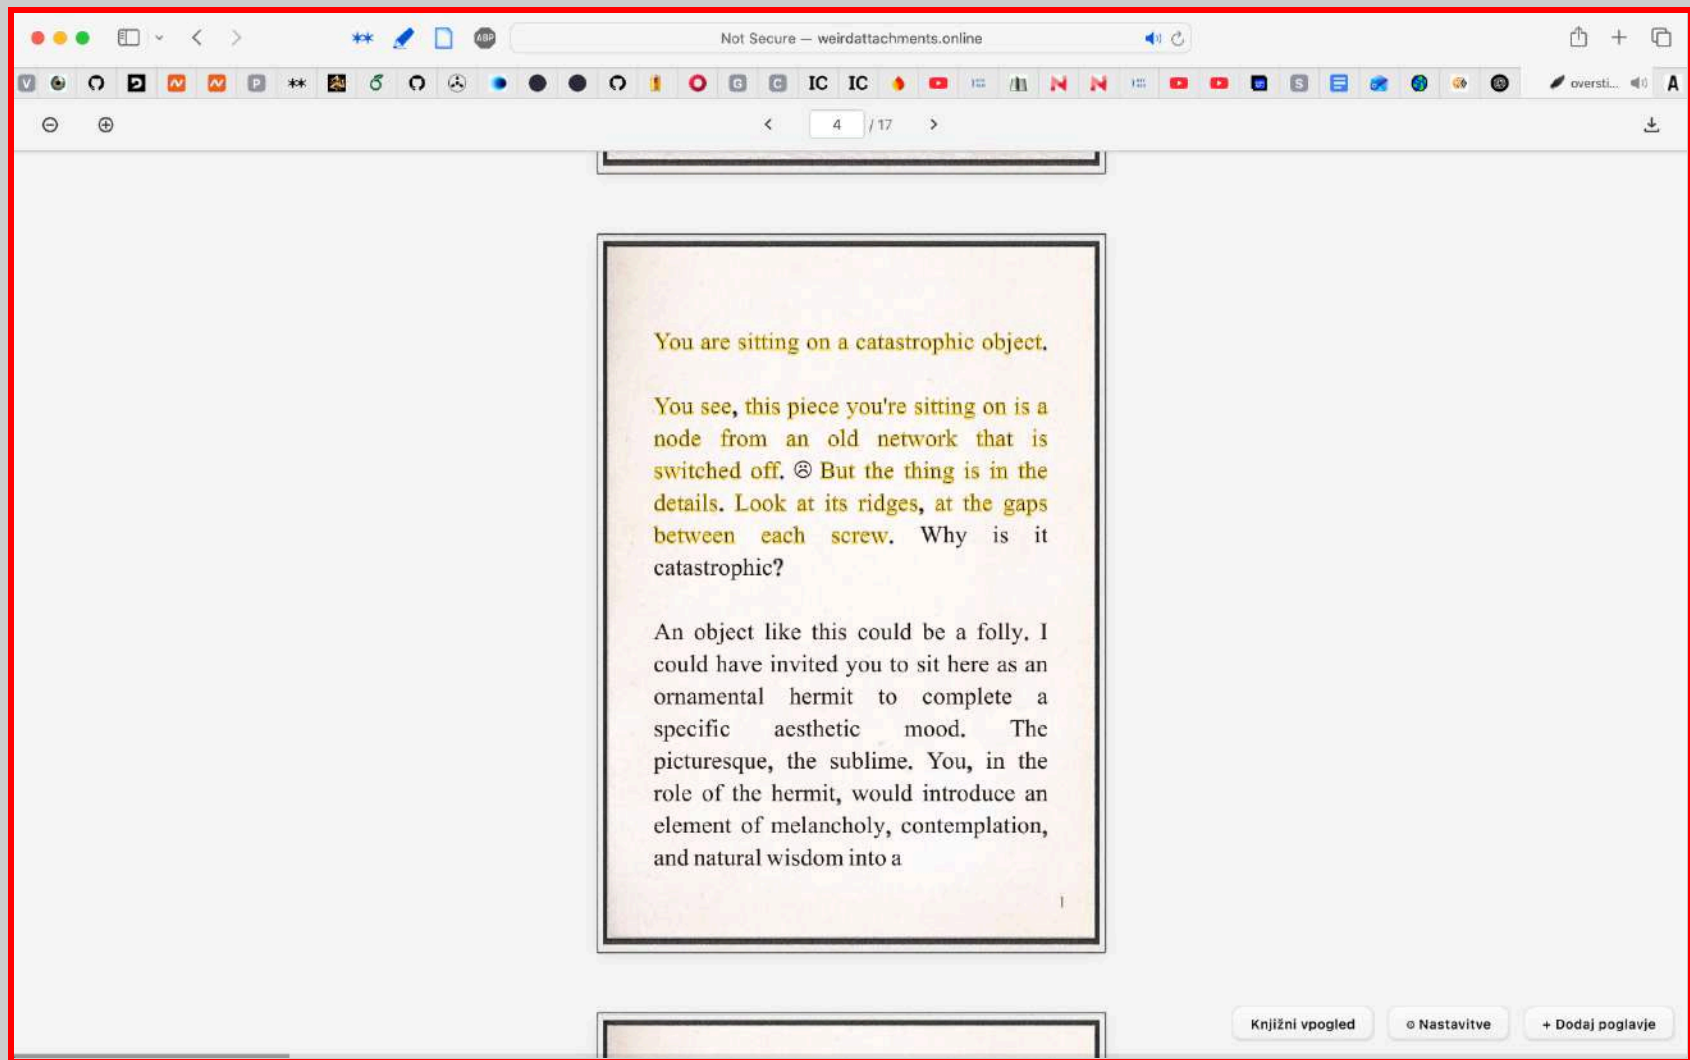

- WEIRDATTACHMENTS.ONLINE

self-publishing book website

19

¹⁹ A publishing project commissioned by a Ljubljana based artist exhibited at [MoTA](#). The website includes a fully-custom rich-text editor with all the traditional book-publishing affordances such as epigraphs, poetry blocks, footnotes, chapter titles and subtitles, custom backgrounds

per-chapter/page, custom page frames, as well as a real-time karaoke-style audio-text highlighting function. The desktop website immitates the form of a pdf-reader (attachment reader), while the mobile version takes the form of an “elevated kindle” reader. The client can update the website as much as she wants and every update will generate a new version of the book, a new attachment.
